

Shmiras Halashon Conference System

Admin and Feature Guide

What Is This System?

The Shmiras Halashon Conference System is an automated daily phone conference. At the times you choose, it automatically calls every person on your list and connects them all into one shared phone call - no app, no internet, and nothing for participants to set up. They simply answer their phone and they are in the conference.

You manage everything through a private admin website. From there you can add or remove phone numbers, set the call schedule, control features, and see who connected on each call.

How a Daily Call Works

Here is what happens from start to finish each time the system runs:

>> Step 1 - The system dials out

At the scheduled time, the system automatically calls every number on your list, one by one.

>> Step 2 - Participants answer

Each person picks up their phone and hears a short greeting: "Joining you into the Shmiras Halashon conference."

>> Step 3 - Everyone is connected

All participants who answered are placed into the same live conference call together.

>> Step 4 - Welcome announcement plays

Once all outbound calls have been placed, the system plays a single welcome message to everyone on the call listing who has joined - for example: "Welcome everyone. The following participants have joined: Moshe, Rivka, and David."

>> Step 5 - The call is recorded

The entire conference is automatically recorded and saved for anyone who missed it.

The Admin Panel

The admin panel is a private website only you can access. It is protected by a username and password that you create the very first time you visit. From here you control every part of the system.

The page does not refresh automatically - your changes and anything you type stay in place until you are ready to submit. You can reload the page manually at any time to see the latest call status.

Features

>> Phone Number Management

Add any phone number to the call list directly on the admin page. You can give each number a name (e.g. "Moshe Cohen") so it is easy to identify. Numbers can be removed at any time.

>> Pause and Resume a Number

If someone is temporarily unavailable, press Pause next to their name. They will be skipped on the next call but remain on your list. Press Resume whenever they are ready to rejoin.

>> Call Schedule

You decide exactly when the system calls each day. You can set different times for different days of the week, add multiple call times in one day, or leave any day without a scheduled call. The schedule saves automatically and stays in place until you change it.

>> Start a Call Now

The button at the top of the admin page lets you launch a conference call immediately, outside of the regular schedule. Useful for unplanned sessions or testing.

>> Last Conference Status

After each call, the admin page shows who was dialed, who connected, who went to voicemail, and who did not answer. A live indicator shows when a call is currently in progress.

>> Dial-In Number

Participants can also call in directly to join the conference themselves, without waiting to be called by the system. The dial-in number is shown on the admin page.

>> Join Announcements

The system handles join announcements in two ways:

1. After the scheduled dial-out finishes, a single welcome message plays to everyone on the call listing all participants who joined - so the whole group knows who is present without any overlapping announcements.

2. If someone calls in after the dial-out has already finished, they hear: "Press 1 to announce your arrival to the group." If they press 1 and their number has a saved name, everyone on the call hears "[Name] has joined the conference." If multiple late callers join around the same time, their announcements are automatically queued and played one at a time so nothing overlaps.

This feature can be turned on or off from the admin page.

>> Conference Recording

Every scheduled conference is recorded automatically. When the call ends, the recording is saved and shown on the admin page with the date and file size. You can download the audio file directly from the page. Each new recording automatically replaces the previous one.

>> Replay for Late Callers

If someone misses the live call entirely and dials in after the conference has ended, the system automatically plays back the full recording for them. If the conference is still running when they call in, they are connected to the live call instead.

Coming Soon

[COMING SOON] Daily Reading Feature

This feature will allow a portion of a book or text to be read aloud automatically into the conference each day using a spoken voice. Participants will be able to vote by pressing 1 on their phone - if everyone on the call votes yes, the reading plays for the whole group.

You will be able to upload any plain text file, choose how much is read each day, and the system will automatically advance to the next portion after each session.

This feature is still being finalized and will be available in a future update.

Day-to-Day Management Tips

>> Adding someone new

Go to the Phone Numbers section, type their number, add their name, and press Add. They will be called on the very next scheduled conference.

>> Removing someone

Press the X button next to their number. They are removed immediately.

>> Temporarily skipping someone

Press Pause next to their name. They will be skipped on the next call but stay on the list. Press Resume when ready.

>> Changing the schedule

Go to the Schedule section. Add a new day and time using the form, or remove an existing entry with the X button. Changes take effect right away.

>> Checking call status

To see the latest call status, simply reload the admin page. The page does not refresh on its own, so a manual reload will always show you the most current information.

>> Downloading a recording

Go to the Recording section on the admin page. After a call has been recorded, a Download button appears. Click it to save the audio file to your device.

Security and Access

The admin panel is protected by a username and password. Only someone with those credentials can view or change anything. The first time you visit the site, it will ask you to create your account. There is one admin account for the whole system.

The site runs securely over HTTPS, meaning all information sent between your browser and the system is encrypted and private.
